Data (first two coordinates), u_i in the span of the means,
$w_i = S^{-1}u_i$ tilted by the within-class covariance
x_1
x_2
w_1
w_2
class 0
class 1
class 2
Oblique code $c = W^\top x$ (train: dots, test: triangles)
the read-out is a linear map of this $r = 2$ vector
$c_1 = w_1^\top x$
$c_2 = w_2^\top x$
Rank test: two eigenvalues above the null,
$r = 2 = C - 1$ retained
λ_1
λ_2
null (500 permutations)
95th percentile
largest eigenvalue of $D_p^\top S_T^{-1} D_p$
